

EPA Met with Capital Region Water to discuss Long Term Control Plan for CSOs – On October 17, 2019, ECAD and ORC met with Capital Region Water (CRW) in Harrisburg, PA to discuss its Long-Term Control Plan (“LTCP”), CRW’s technical plan to reduce combined sewer overflows (CSOs) from its collection system. CRW discharged more than 1.3 billion gallons of combined sewer overflow to the Susquehanna River and Paxton Creek in 2018. The LTCP is a requirement of the Consent Decree signed by CRW and the City of Harrisburg and which was lodged in February of 2015 and modified by Joint Stipulation in August 2015. The conversation between EPA, PADEP, and CRW was very productive, resolving numerous technical concerns with the LTCP. EPA, PADEP, and CRW plan to meet again the week of November 18, 2019 to resolve any remaining technical issues. (S. Maslowski 215-814-2371, Nina Rivera 215-814-2667, & Pam Lazos 215-814-2658)
